

Nexora Corporate Knowledge Base: Incident Response Plan

Target Role: ALL | Version: Official | Published: 2026-09-25

1. Incident Severity Definitions

- Sev1 (Critical): Total service outage, critical data loss, or active security breach affecting >10% of customers. SLA response: < 15 minutes.
- Sev2 (Major): Partial system degradation or core feature failure with no workaround. SLA response: < 30 minutes.
- Sev3 (Moderate): Non-critical service failure with available workaround. SLA response: < 2 hours.
- Sev4 (Minor): Minor UI defect or operational inconvenience. SLA response: Next business day.

2. Escalation & Communication Protocol

Sev1 and Sev2 incidents automatically trigger PagerDuty alarms to the Primary On-Call Engineer. The Primary On-Call assumes the role of Incident Commander (IC). All live coordination takes place in the dedicated Slack war room '#incidents' and an active Zoom incident bridge.

3. Status Page Updates

The Incident Commander or Communications Lead must post an initial customer-facing update to status.nexora.com within 20 minutes of Sev1 declaration and provide updates every 30 minutes until resolution.

4. Blameless Post-Mortem

For all Sev1 and Sev2 incidents, a blameless post-mortem document must be drafted within 48 hours and reviewed in the weekly Engineering Operations Review.

6. Incident Roles

Every declared incident staffs three roles: Incident Commander (the Primary On-Call), Communications Lead (status page and stakeholder updates), and Scribe (timeline and decision log). One person may cover Comms and Scribe for Sev3 and below.

7. Customer Communication Ownership

Only the Communications Lead posts to status.nexora.com and customer channels. Engineers post technical updates in #incidents; customer-facing wording is drafted with Support leadership.

8. Follow-Up Action Tracking

Post-mortem action items become Jira tickets with owners and due dates, reviewed in the weekly Engineering Operations Review until closed. Repeat incidents reopen the original post-mortem.
